Klyth Balitao

INITIAL PROMPT:

Create a one-page website for my personal portfolio.
Include sections: Home, About Me, Skills, Projects, Contact.
Use a clean modern design with a black,red and white color scheme.
Make it responsive and visually appealing and easy to navigate

26 minutes ago

REFINEMENT PROMPTS:

main name is Klyth Balitao

about me is
2006
male
student

Skills
engineering
cars troubleshooting
etc..

Also divide the projects into two

Finished projects and Future projects

make the color red pop more

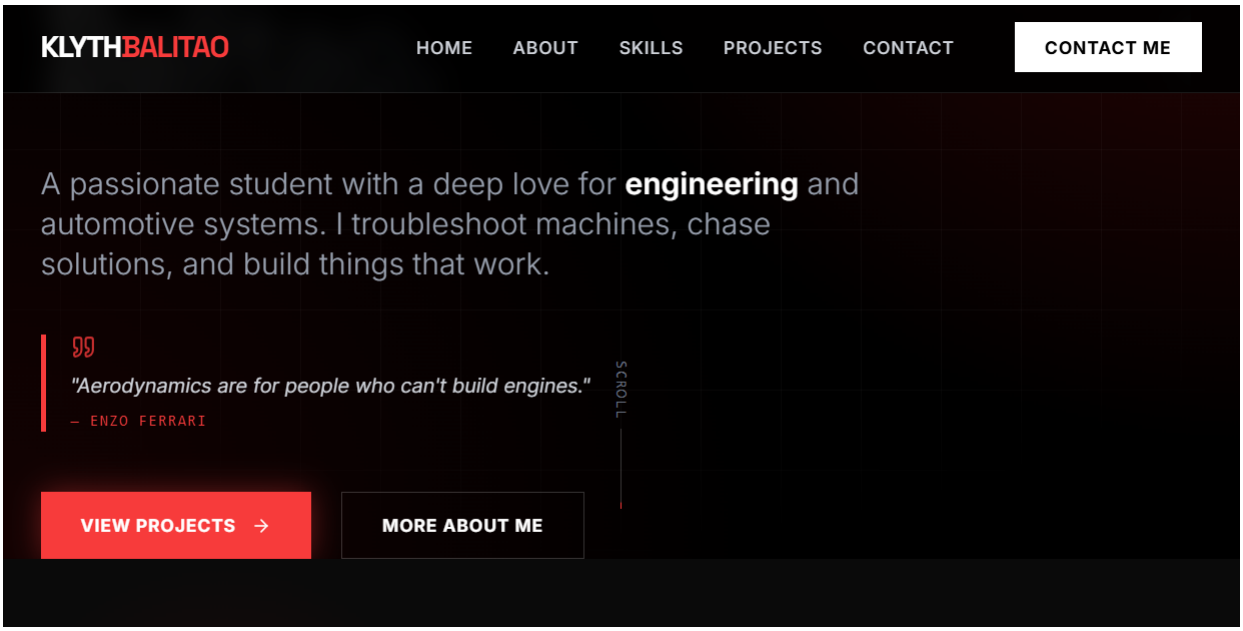
and the two types of project be visibile at the top side under the project bar

inlcude a quotes about machines and car that would highlight in all of the parts and make it ideal on each part

also highligh engineering in the whole website

7 minutes ago

MAIN WEBSITE:



ABOUT ME

BORN	2006
GENDER	Male
STATUS	Student
PASSION	Engineering

I'm Klyth Balitao — a student who's always had grease on his hands and questions in his mind.

Ever since I was young, I've been drawn to how things work — especially machines. Cars are more than just transportation to me; they're puzzles waiting to be solved. Whether it's diagnosing a strange engine knock, tracing an electrical fault, or understanding why a system fails, I find purpose in the process of **figuring it out.**

As a student, I'm building my foundation in **engineering principles** — learning to think systematically, troubleshoot methodically, and approach every problem with patience and precision. My goal is to turn this passion into a career where I can **engineer solutions that matter** — in automotive systems, mechanics, and beyond.

"Science can amuse and fascinate us all, but it is engineering that changes the world."

— ISAAC ASIMOV

Automotive

Cars are my first love. I study how engines breathe, how systems communicate, and how to diagnose faults from the

Troubleshooting

I thrive on the detective work of finding what's broken. Every problem has a root cause — I don't stop until I find it.

Learning

Still a student, always a student. Engineering rewards the curious, and I'm committed

ENGINEERING SKILLS
THE SKILLSET
From under the hood to engineering theory — the tools and knowledge I bring to every problem.
"Give me six hours to chop down a tree and I will spend the first four sharpening the axe."
— ABRAHAM LINCOLN

ABOUT
SKILLS
PROJECTS
CONTACT
CONTACT ME
Engine Mechanics
Understanding engine components, cycles, and performance.
Car Troubleshooting
Diagnosing vehicle issues through systematic analysis.
Electrical Systems
Reading wiring diagrams and tracing electrical faults.
Fault Diagnostics
Identifying root causes of mechanical and electronic failures.
Performance Tuning
Optimizing engine output and vehicle efficiency.
Automotive Repair
Hands-on repair of mechanical systems and components.
Engineering Principles
Applying physics and math to real engineering problems.
Safety Protocols
Following proper safety standards when working on vehicles.
Fabrication
Building and modifying parts to fit specific requirements.
Fuel Systems
Understanding fuel delivery, injection, and combustion.
Drivetrain Systems
Transmission, driveshaft, and differential knowledge.
Technical Research
Reading
and technical documents.

AUTOMOTIVE ANALYSIS

Engine Diagnosis Report

A thorough diagnostic report on a misfiring 4-cylinder engine. Traced the fault to a failing ignition coil through systematic cylinder isolation, compression testing, and OBD scan data analysis.

Engine Diagnostics | OBD-II | Compression Test | Ignition System

ELECTRICAL SYSTEMS

Automotive Electrical Fault Fix

Identified and repaired an intermittent short circuit in a vehicle's lighting system. Used a multimeter and wiring schematics to trace the fault through 20+ feet of wiring and resolve it without replacing the entire harness.

Wiring Schematics | Multimeter | Short Circuit | Electrical Repair

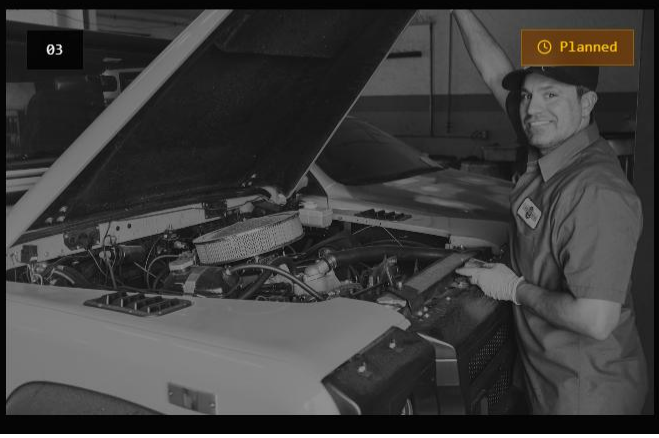
FUTURE PROJECTS

2 planned



FUTURE PROJECT

DIY Engine Rebuild

Planning a full teardown and rebuild of a small displacement engine to study internals firsthand — from crankshaft inspection and bore measurement to reassembly and break-in procedure.

Engine Rebuild | Machine Shop | Precision Measurement | M

FUTURE PROJECT

Custom Car Monitoring System

Designing a real-time vehicle data monitor using a Raspberry Pi and OBD-II adapter to display live engine metrics — RPM, coolant temp, throttle position, and fuel trims — on a custom dashboard.

OBD-II | Raspberry Pi | Electronics

1. Final Reflection:
    - What worked well?

      The ai used worked really well for most parts as it was able to materialzed what I envisioned and even more. From simple prompts it was able to know what wanted it to do without me giving too much information that even I cannot imagine.

    - What needed manual fixing?

      What needed manual fixing was my personal details as the Ai wouldn't have known anything about me unless I told it so. It was a minor fixing but nonetheless still a fix that was needed to be done manually.

    - What did you learn about prompting?

      What I learned about prompting was that the more detailed the prompt is the better the result could be. However, Like most things too much of something is also bad as too much detail and information can sometimes overload what the AI is capable of doing.
